

FIREHOUSE TESTING

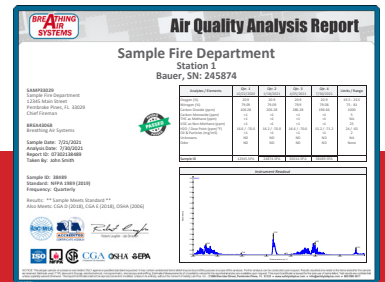

IS YOUR FIREHOUSE AIR SAFE?

Plenty of stock is rightfully placed on testing the air that goes into the high-pressure cylinders worn by firefighters. But what about the air in the spaces that house them while they wait to answer the call of duty? Safety Lab Plus has devised a way to assure that the air breathed in the living areas of fire houses, where they spend most of their time, is safe. Long term exposure to hazardous materials, even in trace elements, has been linked to several serious health issues. SLP tests to several different National Fire Protection Association standards, including NFPA 1851.

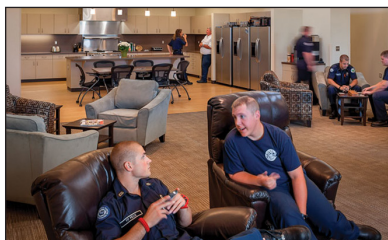

First responders are our front line of defense in an emergency. We have been at the forefront of providing purity testing services and life-saving innovations to fire fighters, police officers, and paramedics for more than thirty years. Our accredited facilities test to all first responder industry standards, including those set by the National Fire Protection Association (NFPA).

EASY AS 1-2-3

- Some hazardous materials to be looked for are: Carbon Moxoide, Hydrogen Chloride, Hydrogen Cyanide, Formaldehyde Acetaldehyde, Nitrogen Dioxide, Carbon Dioxide, Benzene, VOCs. Plus many more...
- SLP has the ability to test and search thousands of hazardous gases and materials.
- Prolonged exposure to poor indoor air quality can lead to some serious health problems. Respiratory proplems, cancer and heart disease.
- Poor ventilation is the number one cause of bad air quality. Firehouse testing can determine if your ventilation is good.

DECON ANALYSIS

WHAT IS DECON?

Short for "decontamination", decon refers to the process of checking for harmful elements present on personal protective equipment and on the body. Because long-term exposure to hazardous contaminants has been linked to several serious medical issues, decon testing is of utmost importance at Safety Lab Plus. We have designed a kit that carefully scrutinizes for HAZ-MAT and tests to several different standards.

There have been growing concern among the fire and life safety community that repeated exposures to harmful contaminations is likely causing increased rates of cancer in firefighters. This includes the fire scene and the subsequent post fire scene exposures to contamination clothing, tool, apparatus, and stations. The exposure to chemicals via permeation/penetration of combustion byproducts through or around Personal Protective Equipment (PPE) or from the cross-transfer of contaminants is rising more and more a concern to the firefighting community.

EASY AS **1-2-3**

IS YOUR DECONTAMINATION PROCESS WORKING?

- Exposure to combusting byproducts of burning materials can contaminate your PPE, Equipment, Hoses and more...
- Some hazardous materials to be looked for are: Carbon Monoxide, Hydrogen Chloride, Hydrogen Cyanide, Formaldehyde, Acetaldehyde, Nitrogen Dioxide, Carbon Dioxide, Benzene, VOCs, PAHs and Particulates. Plus many more...
- SLP has the ability to test and search thousands of hazardous gases and materials.
- Be part of the "CCC" - Clean Cab Concept.
- Be positive, Be responsible, Be vigilant, Be a LEADER!
- SLP CAB and PPE Testing Kit, Fire House Testing Kit and SCBA Testing Kit - Affordable, Easy and Fast
- Test for dangers you can't see.
- **NFPA 1851:2014**

FIREHOUSE DECONTAMINATION TESTING PRICE LIST

SLP-DASK: \$349.00 (AMBIENT AIR & SURFACE SAMPLE KIT)

This kit includes two sampling bulbs, two sample bags and a one sampling puck

- 1st bag is for the ambient outdoor control sample
- 2nd bag is for the room / cab that is being tested
- Sample puck is for collecting materials built up on surfaces

SLP-DAK: \$159.00 (AMBIENT AIR ONLY KIT)

This kit includes two sampling bulbs and two sample bags

- 1st bag is for the ambient outdoor control sample
- 2nd bag is for the room / cab that is being tested

SLP-DSK: \$229.00 (SURFACE SAMPLE ONLY KIT)

This kit includes one sample puck and swab for collecting materials built up on surfaces

- SLP-DSP (additional surface sample puck)

Additional Test Kit Samples:

- SLP-DAA: \$129.00 (additional ambient air room / cab sample bag & bulb)
 - requires at least one SLP-DASK or SLP-DAK
- SLP-DSS: \$199.00 (additional surface sample puck)
 - Requires at least one SLP-DASK or SLP-DSK
